Suggestions for the betterment of the service will be appreciated.

An extra charge of 25c per capita will be made for all meals served to adults outside of the dining car.

C. E. BELL, Superintendent Dining Cars, Washington, D. C.

BIRMINGHAM

The Industrial Center of Dixie

PICTURE yourself on a mountain top looking down on a great industrial city, extending many miles through a valley and spreading out upon mountain slopes beyond—tall modern buildings and factory smoke-stacks protruding upward toward the blue Southern sky. Directly beneath you on the slope, the winding drives are interspersed with beautiful tree shaded homes—handsome dwellings of stucco or brick—and many others built of the limestone and granite taken from the mountains in the vicinity. Such is Birmingham as seen from one of its surrounding hills.

On its busy streets 300,000 people walk—in its 700 manufacturing plants 2,000 different articles are produced—articles ranging from pen points to steam engines. It is said that this city could lock itself in and exist on its own products—food and clothing included. Here, as in no other spot in the world, are found together, coal, iron ore and limestone—all necessary for producing steel. Hydro-electric power is cheap and labor conditions ideal.

Birmingham, last year, produced 18,500,000 tons of coal—4,200,000 tons of coke—2,700,000 tons of iron—1,135,000 tons of steel. This district produces a great quantity of cement.

Besides being a manufacturing center, Birmingham is an ideal city in which to live. The climate is mild and the surrounding mountains provide splendid dwelling sites. Some of the most charming homes in Dixie rest upon the elevations overlooking the business section.

As famous as its industries are Birmingham's educational advantages. The model public school system is studied by educators from other parts of the country. A child may start its education in a kindergarten and continue through one of the two colleges in the city.

The many conventions that come here are welcomed and entertained by a convention bureau. For their accommodation there are modern hotels, a city auditorium of 6,600 capacity, and other smaller assembly rooms.

Birmingham, whose site was only a railroad station until nearly 1880, has had fifty years of constant growth and prosperity. It promises to continue greater than ever, as evidenced by the work of its civic clubs and by the announcement of extensive expansions by the Tennessee Coal, Iron and Railroad Company, the Gulf States Steel Company, and other industries.

One of Birmingham's chief avenues of transportation to the large Eastern Cities, and to Florida, is provided by the Seaboard Air Line Railway.
